METHOD OF SURVEY

The control traverse was accomplished using "Trimble 4000 SSI" survey grade global positioning system (GPS) receivers and a constrained least squares adjustment, based on N.G.S. first order control station "AIRP", NAD83 1992 data: Lat. 48°55'09.13362"N, Long. 115°05'15.01126"W and first order control station "E504", NAD83 1992 data: Lat. 48°47'59.58062"N, Long. 115°17'47.36935"W. A one second, Total Station (Sokkia Set 2 CII, SN: 13395) and a data collector (HP48GX with TDS software) were used in closed traverse procedures. Closed traverses were run from the control traverse positions, subsequently offsets were computed from the random traverse points, to the true boundary line. The boundary lines were marked and posted by blazing and pointing trees, and placing galvanized steel delineator posts with property boundary decals; along the true line; adhering to the standards referred in the U.S.D.A. Forest Service, Region One Cadastral Survey Contract Specifications Manual, dated 1987.

BASIS OF BEARING

Bearings are based on G.P.S. ties to H.A.R.N. Stations and then transformed to a user defined Transverse Mercator coordinate system.
Magnetic Declination is 18 1/2' East, based on the 1990 Edna Mountain Quadrangle sheet.
