1. Original and/

4. Sketch or corner, show all pertinent data which can best be shown in a sketch example, corner markit topography ties, position of accessories, etc.

5. Certification must be signed and seemed by Registered Land Surveyor in State of Montana.

6. Full in Cross Index & Rantism Planman of Indiana of Alexandra.

4. Fill in Cross Index & Section Diagram at bottom of sheet.

# **CERTIFIED CORNER RECORDATION**

Corner	CN1/16 Sec.	6 T. 31N.,	R. 33W.,	P.M.M. LINCOLN	County

As per Certificate of Survey No. 939, set a 5/8 x 24 inch capped steel pin stamped 4661S. (J.H. Ninneman).

Found rebar as described above, which bears  $57^{0}16$  E, 4.11' from the position determined II.

by this survey. (see note below)
At determined position: Set a 3/4 x 24 inch aluminum rod 21 inches in the ground with 3 inch aluminum cap marked as shown. From which:
A 9.2 inch Douglas-fir bears N89<sup>E</sup>, 2.9 feet. Scribing visible. (Old BT)
A 20.3 inch Western larch bears S84<sup>O</sup>W, 19.3 feet. Scribing visible. (Old BT) III.

Painted red bands around BT's. Buried rebar beside aluminum rod.

Note: The difference in these positions results from a combination of two factors: (1) finding original evidence of the West quarter corner which previously was positioned by single proportion, subsequently affecting all interior corners; and (2) a difference in the method of computation for the location of the North tier of lots in the section.

Mr. Ninneman was informed of our findings and gave permission to remove his monument and place it beside ours.

CERTIFICATION Douglas R. Maday N. 1/16 S6 Thomas C. Hill ertify that this Corner Record correctly repre by me or under by direction in compliant Recordation Act. (70,22-101, et seq., M.D.A. 5612S 1982 LARCH 5612S Date: 1/6/83 Reg. No. 6687 **SKETCH OF CORNER** Sec. Linean Office of Clerk and Recorder, County of . record" was filed for record on the . \_day of 19ऄ

was noted on the cross-index plat and is assigned page No.  $\frac{2173}{}$ 

book No. .

# INSTRUCTIONS TO SURVEYORS FOR COMPLETION OF CERTIFIED CORNER RECORDATION FORMS

## I. ORIGINAL AND/OR SUBSEQUENT RECORD:

This item should describe or quote those portions of the original or subsequent record which were used in evaluating the corner position. The original record will usually be the General Land Office field notes. Subsequent record can come from several sources: Previously filed corner records, maps and plats, private and public records, etc. Some of the subsequent record, even though not in the public record, but known to have validity by the surveyor, may be quoted and appropriately noted.

The record data helps support the reestablished corner position because it clearly shows what history the surveyor based his corner position on. In some cases, however, the record may be unknown or not pertinent. A statement to that effect should appear on the corner record.

# II. DESCRIPTION OF EVIDENCE FOUND OR METHOD OF LOCATING CORNER POSITION:

This item will describe the original or subsequent record evidence found. If portions of the found evidence cannot be recorded with the record, then the disregarded record should be noted, and, if possible, an opinion as to its cause narrated.

If no physical evidence of the original or subsequent monuments and accessories can be found, then the method used to reestablish the lost or obliterated corner (single proportion, fence intersection, parol evidence, terrain calls, centerline of road, etc.) shall be indicted.

#### III. DESCRIPTION OF MONUMENTS AND ACCESSORIES SET TO PERPETUATE THE CORNER POSITION:

This item should list all details about the corner and its location which will help exclusively identify the corner position; including size and type of monument, how marked if not shown in sketch, and distinguishing topographic calls which help locate the corner. In many cases, instructions on how to find the corner should be included.

References or ties to other corners are optional and may be drawn on the face or back of the corner record form, or references to Certificate of Survey may be made. Separate drawings may be attached to the corner form.

If state plane coordinate values for the corner position are shown, then the control upon which they are based should be indicated.

#### IV. SKETCH OF CORNER:

This item will usually show how a found or set corner is marked and may also show topography or accessory monuments found or set and their relation to the corner. There is no stipulated format; the sketch could be transcribed field note entries.

### V. CERTIFICATION:

The name and signature of the ground party chief is optional.

The Surveyor who performed or directed the field work which is depicted on the "Certified Corner Record" shall sign and affix his seal in the Certification.

The employer blank is optional but useful in tracking down original field note data or adjacent record if, in the future, questions arise about the corner.

VI

The Cross index at the bottom of the page should be completed by the Surveyor. Only the single Township Index where the corner is filled shall be completed.

The lower righthand corner is a corner location diagram and should have the pertinent section filled in at the top and a closed circle indicating the appropriate corner position in the section filled in. This is intended to be an aid in searching the "Record" once it has been filled.
